About the screenshots in this guide

The screens shown are faithful reproductions of the app's real interface (same fonts, colors and components as the portal). Order, customer and waybill data are examples.

What is PATHXPRESS?

PATHXPRESS Portal is an app **embedded in the Shopify admin** that connects your store to the PathXpress courier network to automate the entire shipping cycle.

From the app you can send orders to the courier, generate waybill numbers, print labels, track each shipment, handle returns and exchanges, and reconcile the money collected on delivery (COD). All without leaving your Shopify admin.

What it does for you

- Syncs orders from Shopify to PathXpress — automatically, by tag, or manually.
- Generates waybills & labels ready to print from each shipment.
- Calculates shipping rates at checkout (dynamic or fixed rates).
- Tracks the status of every package with a full history.
- Reconciles COD: shows what is pending collection, collected and already remitted to you.
- Processes returns and exchanges approved in Shopify automatically.
- Rescues orders that failed to sync with one click.

The five main screens

Screen	What it's for
Dashboard	Today at a glance: shipments, packages in transit and pending COD, plus the list of your recent shipments.
Orders	List of Shopify orders to select and send to PathXpress (manual mode).
Rescue	Orders that didn't sync correctly; retry them one by one or force all at once.
Settings	Configuration: Client ID, sync mode, default service, free shipping and returns.
COD	Reconciliation of the cash collected on delivery.

Prerequisites

Before installing the app, make sure you have the following:

- An active **Shopify store** with admin permissions.
- Your **PathXpress Client ID** (provided by the PathXpress team; you'll need it during setup).
- For dynamic rates at checkout: a Shopify **Advanced/Plus** plan or the *“third-party calculated shipping rates”* add-on. On the Basic plan, the app offers fixed rates as an alternative.

Don't know your Client ID?

Contact PathXpress support. Without a valid Client ID the app cannot create shipments.

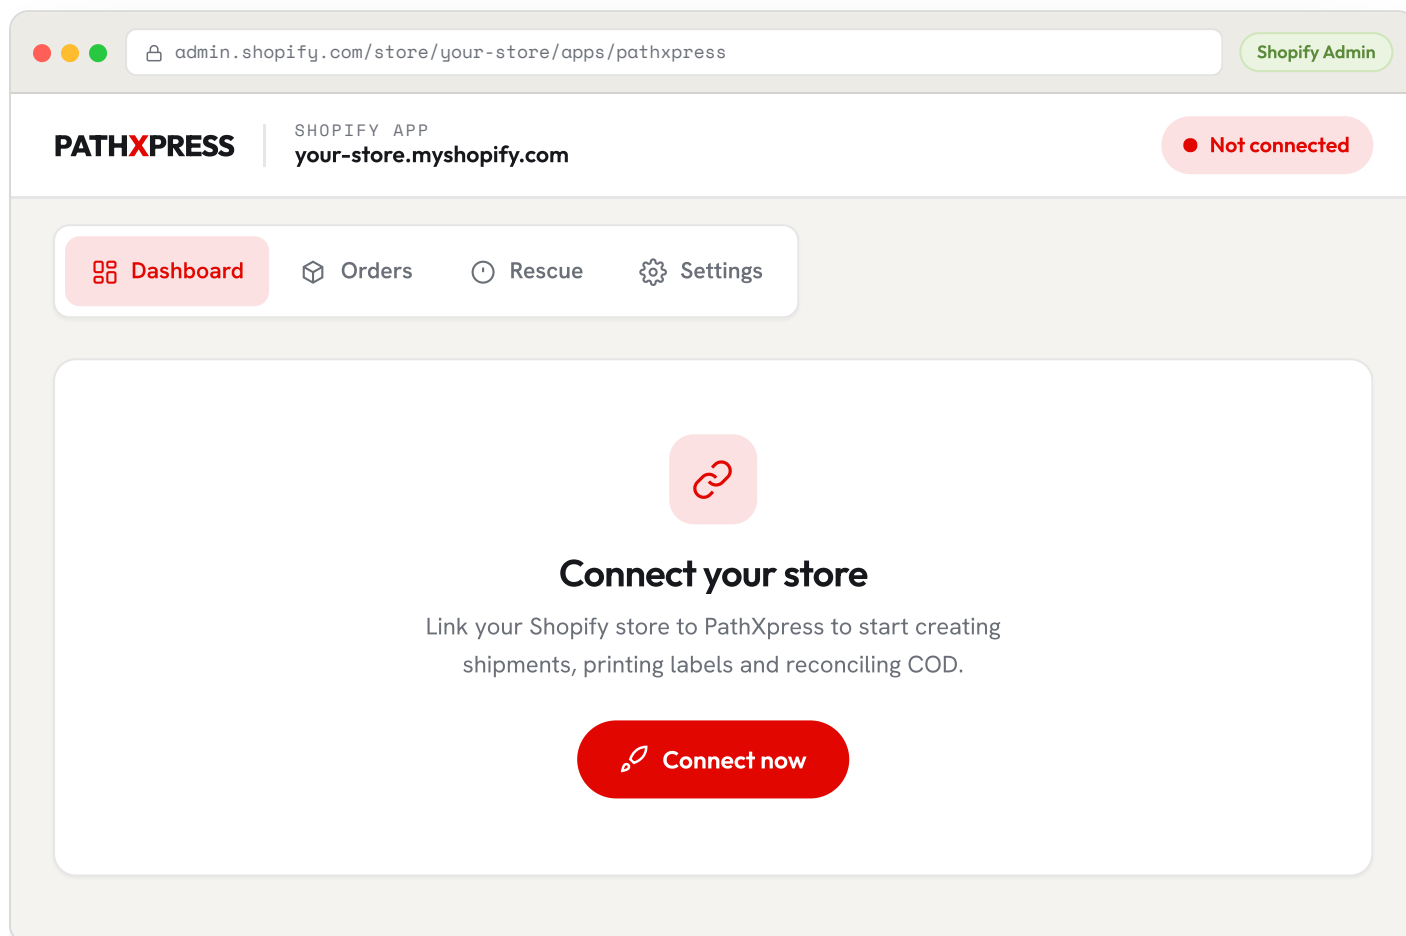

Permissions the app requests

During installation, Shopify will ask you to authorize these scopes so the app can read orders and create shipments and returns:

Permission	Reason
<code>read_orders</code> / <code>write_orders</code>	Read and update orders.
<code>read_fulfillments</code> / <code>write_fulfillments</code>	Create and update fulfillments.
<code>read_shipping</code> / <code>write_shipping</code>	Calculate and register shipping rates.
<code>read_returns</code> / <code>write_returns</code>	Process returns and exchanges.

Install & connect

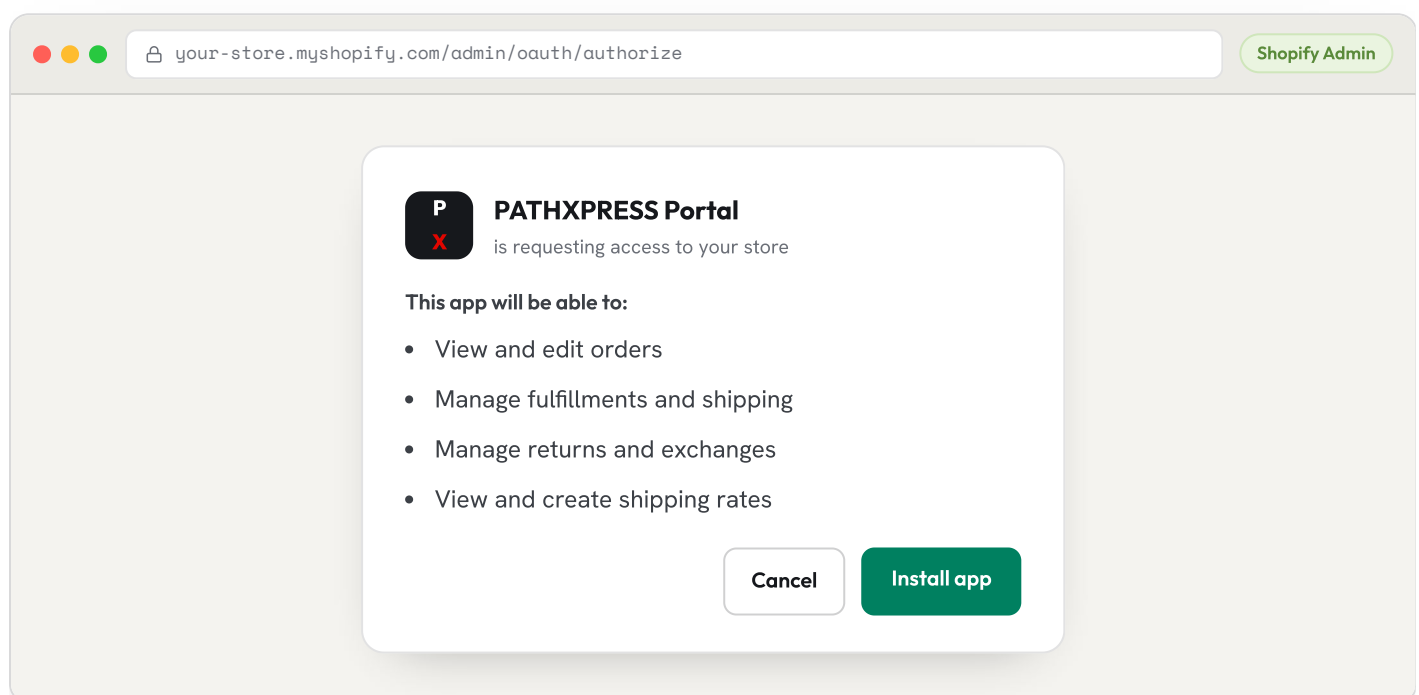

The first time you open the app inside Shopify, it isn't connected to your PathXpress account yet. You'll see this welcome screen:

Initial screen – the store is not connected yet (“Not connected” badge).

Steps to connect

- 1 **Open the app in Shopify.** Go to Apps → PATHXPRESS Portal in your store admin.
- 2 **Click “Connect now”.** This starts Shopify's authorization (OAuth) flow.
- 3 **Authorize the permissions.** Shopify shows the list of scopes the app needs. Review and click Install.
- 4 **Done.** You return to the app and the badge changes to **Connected** (green dot). Now you can configure it.

Shopify's authorization (OAuth) screen – generated by Shopify, not by the app.

Persistent connection

Once connected, the app remembers the access even if you log out or the server restarts. You only repeat this step if you uninstall the app.

SECTION 04

Initial setup (Settings)

After connecting, go to the **Settings** tab. This is where you define how PathXpress integrates with your store. It's the most important step.

Configure how PathXpress integrates with your Shopify store.

10472

Your client ID in the PathXpress portal. Contact support if you don't know it.

All new orders are automatically sent to PathXpress when created in Shopify.

Only orders with the specified Shopify tag are synced automatically.

Orders appear in the list. You choose which ones to send to PathXpress from the Orders page.

DOM — Next Day (1-2 days)

Default service applied to all orders from this store. Services shown are the ones enabled for your PathXpress account.

Minimum order amount to offer free shipping. Leave empty to disable.

200

1-2 day delivery

500

Same day delivery

Returns & Exchanges

Automatically process approved returns & exchanges

When enabled, returns approved in Shopify are automatically sent to PathXpress for pickup.

Save Settings

Full Settings screen – every configuration option.

Each option, explained

1• PathXpress Connection — Client ID

Enter the **Client ID** assigned to you by PathXpress. It identifies your account in the portal and is **required**: without it the app cannot create shipments or read your services.

2• Order Sync Mode

Defines when Shopify orders are sent to PathXpress. Pick one:

Mode	Behavior	Best for
 Automatic	Every new order is sent to PathXpress automatically when it's created in Shopify.	Stores that ship every order with PathXpress.
 By Tag	Only orders that have a specific Shopify tag (e.g. <code>send_pathxpress</code>) are synced.	Stores using several couriers.
 Manual	Orders appear in the Orders tab and you choose which to send.	Full control, order by order.

“By Tag” mode

When you choose this mode an extra field appears to type the exact tag. Only orders with that tag sync automatically.

3• Default Shipping Service

The courier service applied to all orders from this store (for example **DOM** next-day 1–2 days, **SDD** same day, **BULLET** 4 hours). The list shows only the services enabled for your PathXpress account.

4• Free Shipping Thresholds

Minimum order amount to offer free shipping. There are two boxes: **Standard (DOM)** and **Express (same day)**. Leave a box empty to disable free shipping for that service.

5• Returns & Exchanges

If you tick the box, when you approve a return or exchange in Shopify it is automatically sent to PathXpress to schedule the pickup.

Don't forget to save

Click **Save Settings** when finished. A green confirmation message appears at the top.

✓ Settings saved successfully.

Confirmation message after saving.

Checkout shipping rates

So your customers see the PathXpress shipping cost at checkout, the app automatically registers a carrier service named **PathXpress Shipping** in your store.

If your Shopify plan does **not** have “third-party calculated rates” enabled, the Dashboard shows this notice with two options:

Carrier Calculated Shipping Not Enabled

Your store does not have “Third-party calculated shipping rates” enabled. Dynamic rates will not work.

Option 1 (Dynamic Rates): Enable “Third-party calculated rates” in Settings → Shipping. *Requires Advanced/Plus plan or add-on.*

Option 2 (Basic Plan): Use Fixed Rates

Automatically configure flat rates for UAE (Standard: 15 AED, Express: 25 AED).

[Create Fixed Rates](#)

Rates notice shown when the plan doesn't support dynamic rates.

Option 1 — Dynamic rates (recommended)

In Shopify go to **Settings → Shipping and delivery** and enable “*Third-party calculated rates*”. This requires an Advanced/Plus plan or the matching add-on. With it, the checkout asks PathXpress for the real cost based on destination, weight and service.

Option 2 — Fixed rates (Basic plan)

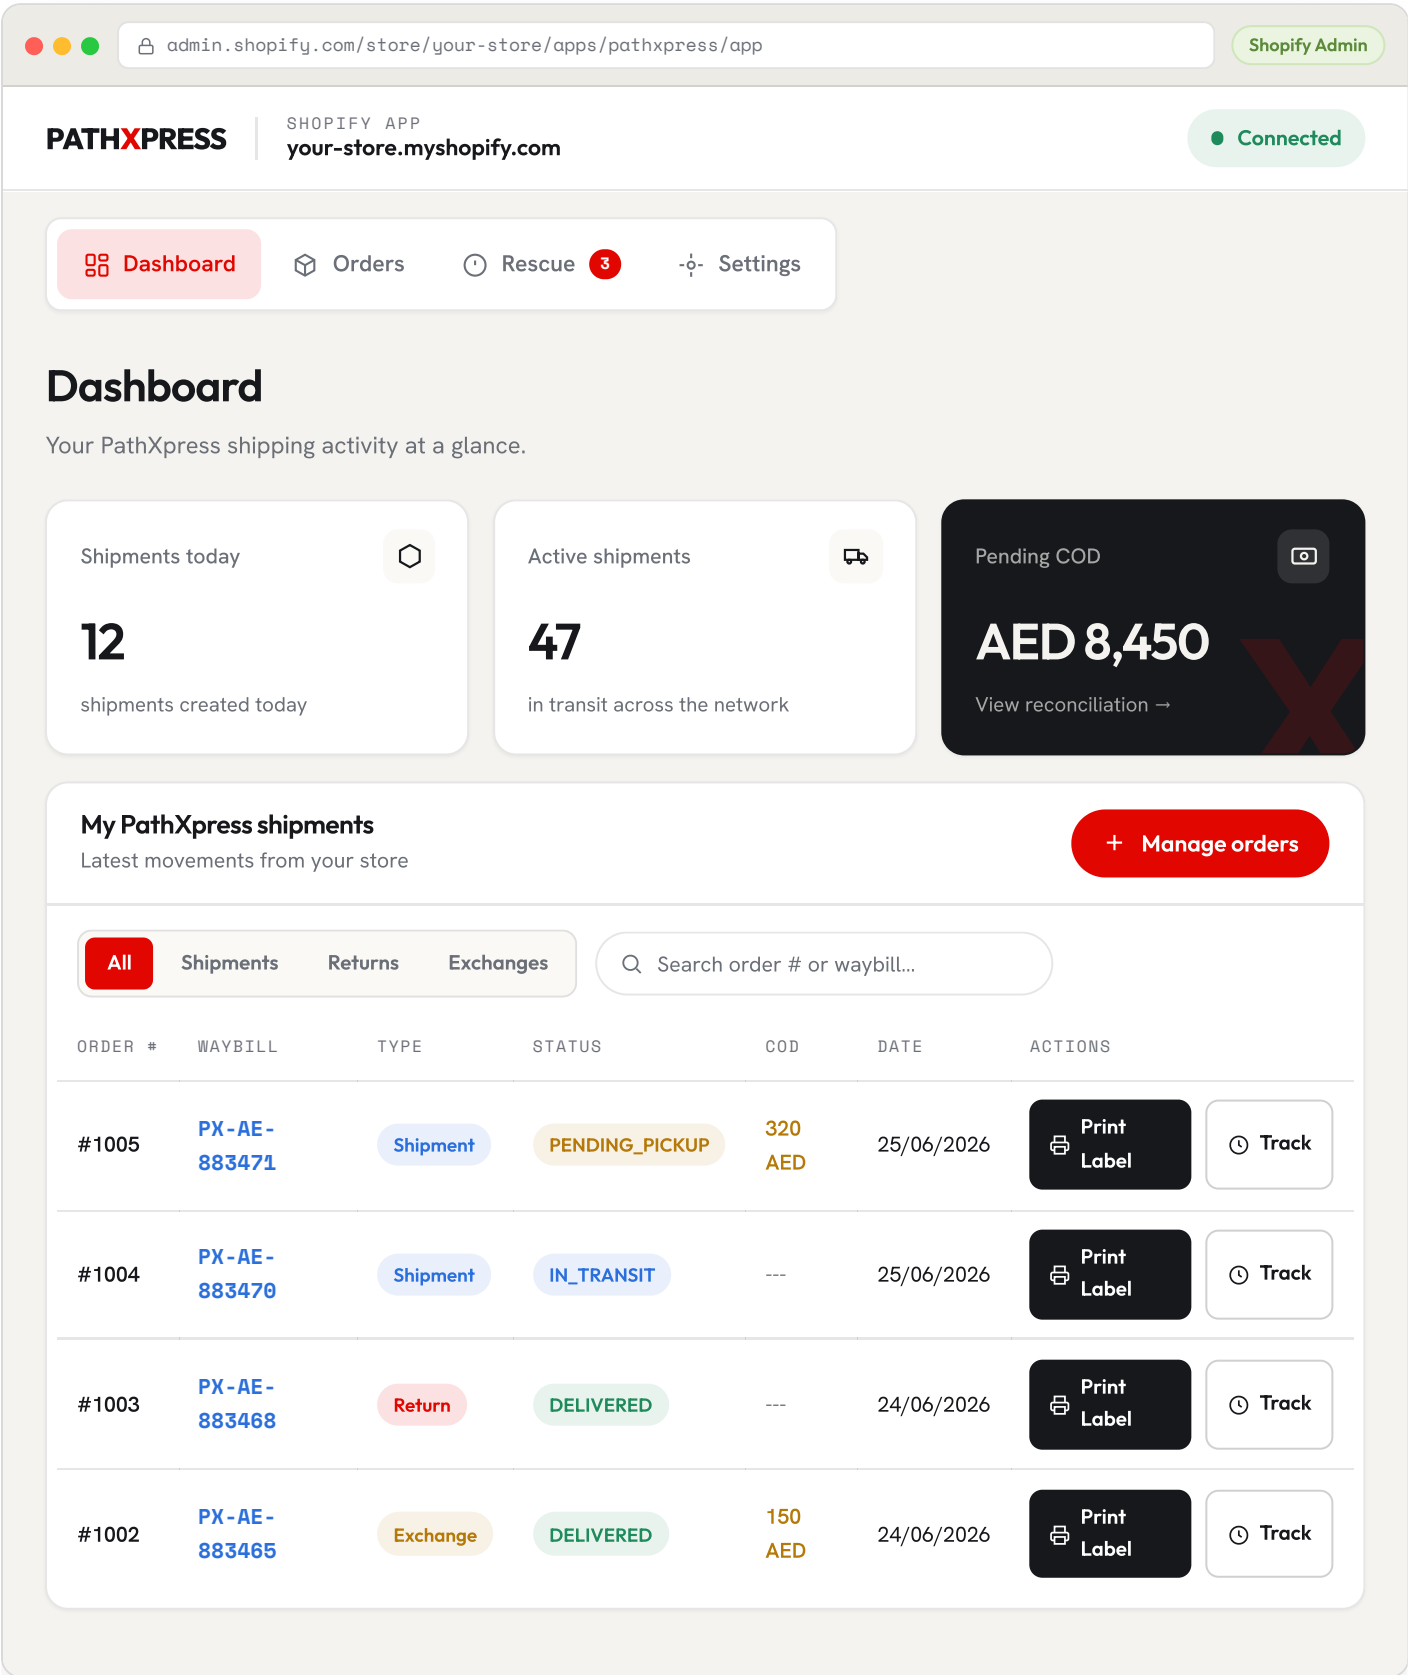

On the Basic plan, click **Create Fixed Rates**. The app automatically creates a UAE shipping zone in Shopify with flat rates (Standard 15 AED, Express 25 AED). You can adjust them later from Shopify's shipping settings.

Don't see the notice?

It means rates are already working. The notice only appears when rate calculation still needs to be enabled.

The Dashboard

This is the home screen once the store is connected. It shows the day's shipping activity at a glance and the list of your recent shipments.

Dashboard with the store connected – KPIs and recent shipments.

What you see on the Dashboard

- **Shipments today** — shipments created today.
- **Active shipments** — packages in transit across the network.
- **Pending COD** (dark card) — money pending collection; click it to go to COD reconciliation.
- **My PathXpress shipments** — shipments table with filters (All / Shipments / Returns / Exchanges) and a search box by order # or waybill.

Each row shows the order number, the waybill, the type, the status, the COD, the date, and actions: **Print Label** and **Track**. Orders not yet picked up also show a delete button.

Order management (Orders)

Here you choose which Shopify orders to send to PathXpress. It's the key screen for **Manual** mode, though you can also use it to sync individual orders in any mode.

Dashboard Orders Rescue Settings

Order Management

Select the orders you want to send to PathXpress.

Sync mode: **Manual** [Change](#)

[Sync Selected \(2\)](#) ☐ Select all pending

Search order or customer...

	ORDER	CUSTOMER	DATE	TOTAL	PCS	STATUS	RESULT
☒	#1008	Aisha Al Maktoum	25/06/2026	450.00 AED	2	Pending	
☒	#1007	Omar Hassan	25/06/2026	120.00 AED	1	Pending	
	#1006	Layla Ahmed	24/06/2026	600.00 AED	3	✓ PX-AE-883462	

Find All Unsynced Orders

Order Management – two orders selected, ready to sync.

How to send orders to PathXpress

- 1 Open the Orders tab.** You'll see your store's orders. The blue strip shows the active sync mode (with a [Change](#) link to Settings).
- 2 Select the orders.** Tick the *Pending* orders, or use **Select all pending**. Already-synced orders show their waybill and have no checkbox.

3

Click **“Sync Selected (n)”**. The button shows how many you'll send. Depending on your setup, it may ask you to pick the service applied to all of them.

4

Check the result. Each row turns **Synced** with its waybill number in the Status column.

Missing orders in the list?

Use **Find All Unsynced Orders** so the app scans your whole store for orders not yet sent to PathXpress.

Labels & waybills

Every synced shipment generates a waybill number and a label ready to print and stick on the package.

Printing a label

- 1 Find the shipment.** On the **Dashboard** ("My PathXpress shipments" table) search by order number or waybill.
- 2 Click "Print Label".** The app opens the official waybill PDF generated by the PathXpress portal in a new tab.
- 3 Print and attach.** The PDF includes the barcode / QR with the shipment data for route scanning.

Official label

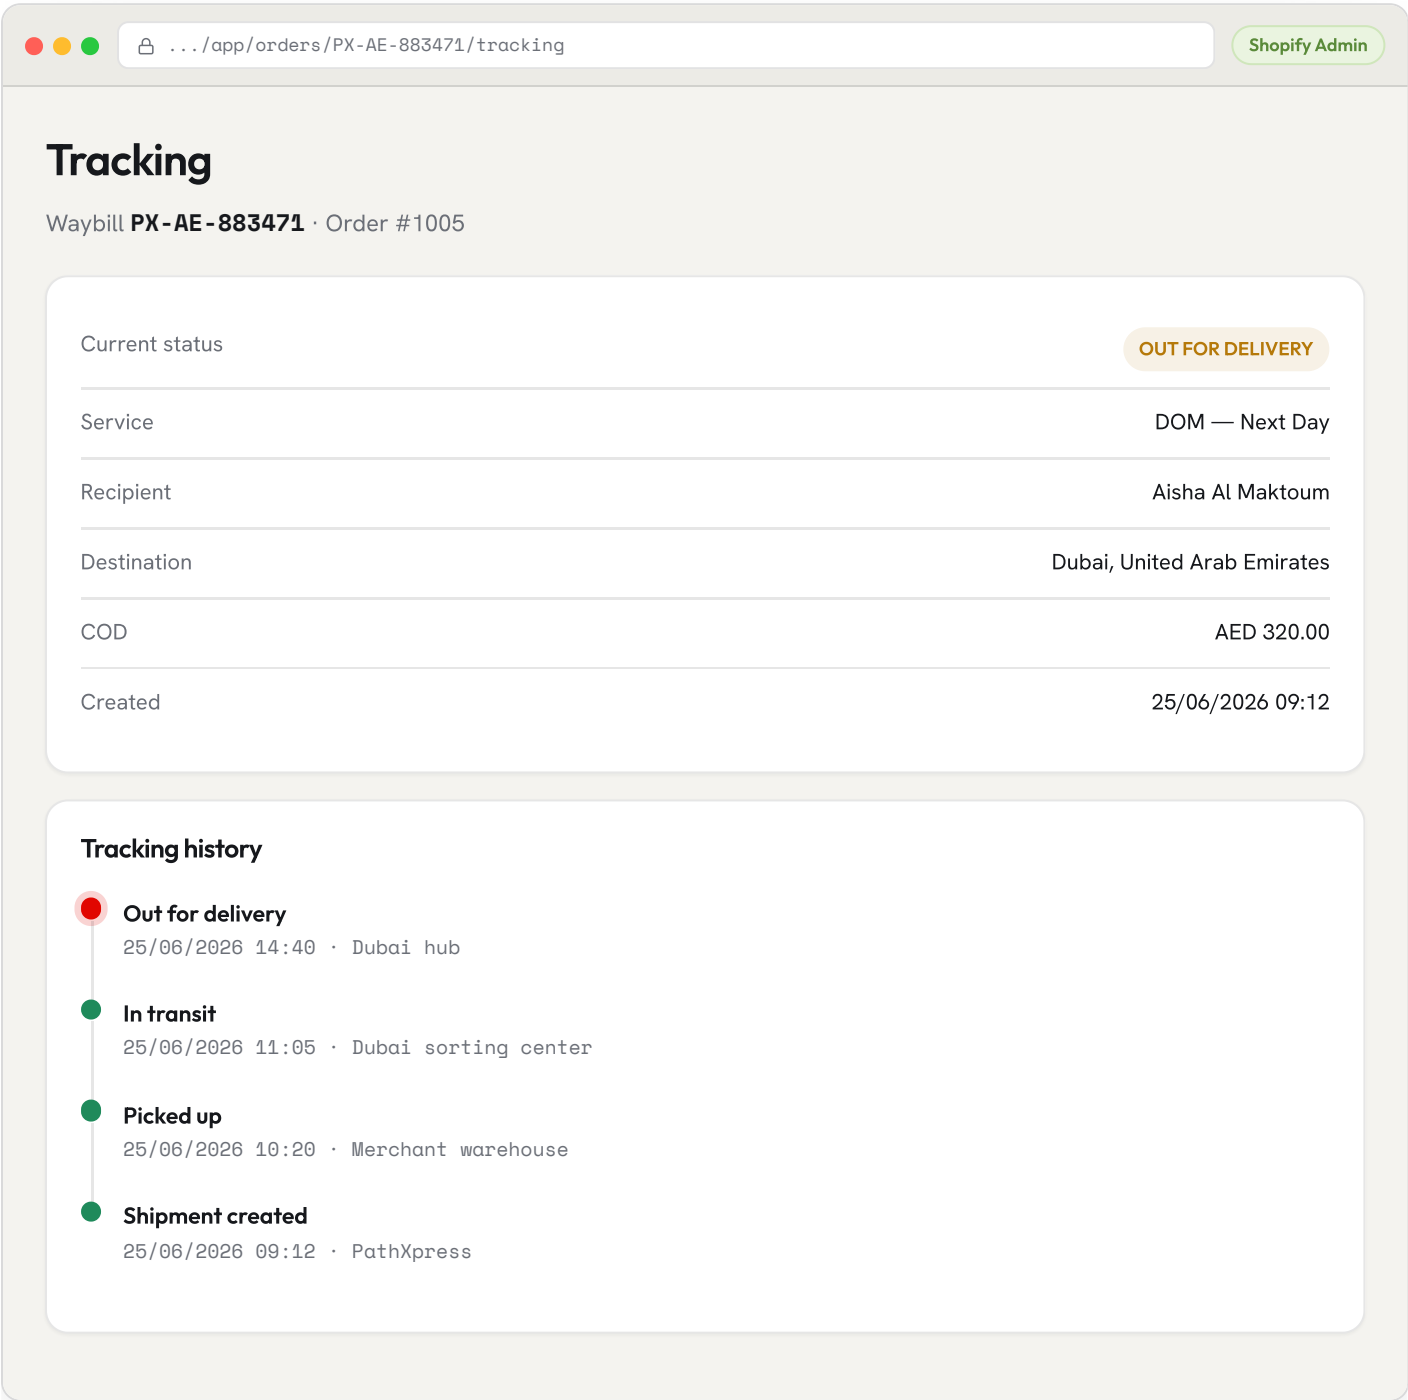

The label comes directly from the PathXpress portal (single source of truth). If the portal is momentarily unavailable, the app generates an equivalent fallback label in the browser.

Is "Print Label" disabled?

It means the shipment doesn't have a waybill yet (status "Pending"). Wait until the sync with PathXpress completes.

Shipment tracking

From any shipment you can click **Track** to see its current status and the full history of movements.

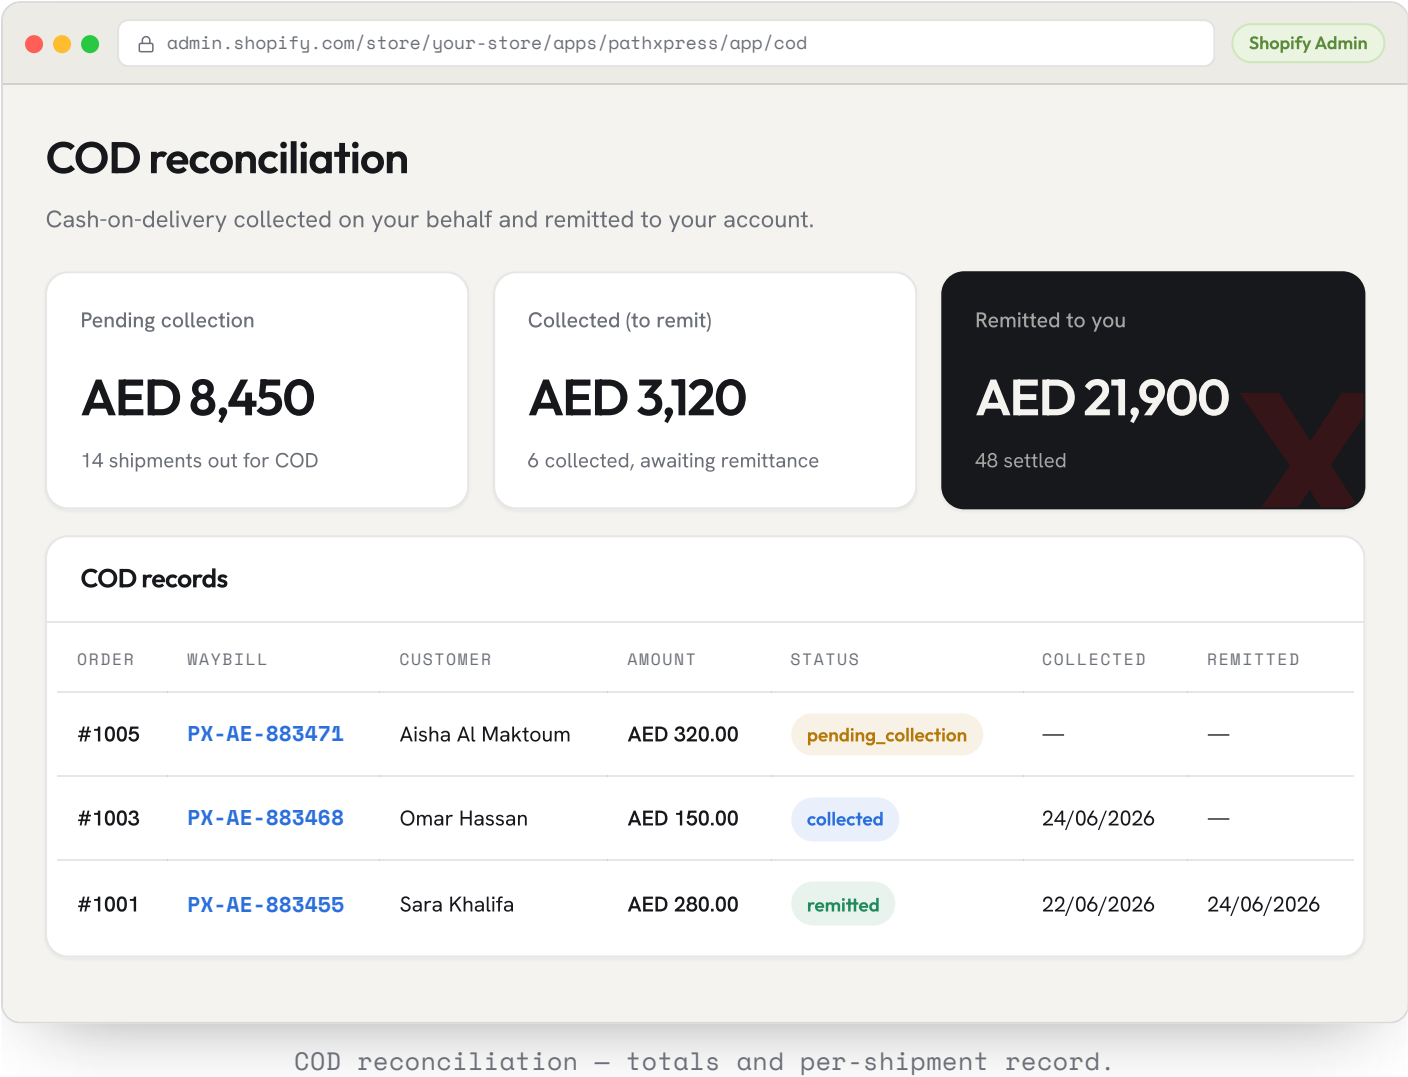

Tracking screen – shipment summary and history.

The top section summarizes the **current status**, the service, the recipient, the destination, the COD (if any) and the creation date. Below, the timeline shows each movement: created, picked up, in transit, out for delivery and delivered.

COD reconciliation

COD (Cash on Delivery) is the money the courier collects from your customer on delivery and then remits to you. This screen shows the status of that money.

The three states of the money

- **Pending collection** — the package is out for delivery but the customer hasn't paid yet.
- **Collected (to remit)** — already collected from the customer; awaiting PathXpress to remit it to you.
- **Remitted to you** — the money is already settled in your account.

The table details each shipment with its amount, status and the collection and remittance dates. It's a **read-only** view for reconciliation; the courier's events keep it updated.

Rescue stuck orders

Sometimes an order is created in PathXpress but isn't reflected correctly in Shopify (the fulfillment isn't marked, or the “delivered” event wasn't sent). The **Rescue** tab detects them and lets you retry.

admin.shopify.com/store/your-store/apps/pathxpress/app/stuck-orders

Shopify Admin

Rescue orders

Orders that could not be synced to Shopify. Retry individually or force all at once.

 **3 orders** need attention and could not be automatically synced.

 **Force ALL (fulfillment + delivered)**

 **Send "delivered" only**

[← Back to dashboard](#)

Without Shopify fulfillment

2 orders pending

ORDER	WAYBILL	PORTAL STATUS	LAST SYNC	DATE	
#1009	PX-AE-883480	IN_TRANSIT	—	25/06/2026	<button>Retry</button>
#1010	PX-AE-883481	PENDING_PICKUP	—	25/06/2026	<button>Retry</button>

Fulfilled but "Delivered" not sent

1 order pending

ORDER	WAYBILL	PORTAL STATUS	LAST SYNC	DATE	
#1002	PX-AE-883465	DELIVERED	24/06/2026	24/06/2026	<button>Retry</button>

Rescue orders – two groups of orders that need attention.

How to use it

- **Without Shopify fulfillment** — orders with a waybill in PathXpress but no fulfillment in Shopify.
- **Fulfilled but “Delivered” not sent** — already fulfilled, but the delivery event is missing.
- **Force ALL** — retries everything (fulfillment + delivered) at once.

- **Send “delivered” only** — only resends the delivery event.
- **Retry** (per row) — retries a single order.

The number next to **Rescue** in the navigation shows how many orders need attention. Ideally, keep it at zero.

FAQ & troubleshooting

The app says “Not connected”. What do I do?

Click **Connect now** on the Dashboard and complete Shopify's authorization. If you'd already connected it, reopen the app from **Apps** in your admin.

I saved the Client ID but no shipments are created.

Check that the Client ID is correct and that your PathXpress account is active. Confirm with PathXpress support. Also review the sync mode in **Settings**.

My customers don't see the shipping cost at checkout.

You need to enable rates (Section 05). On Advanced/Plus enable *third-party calculated rates*; on Basic use **Create Fixed Rates**.

I chose “Automatic” mode but an order wasn't sent.

Go to **Rescue** and retry, or open **Orders** and use **Find All Unsynced Orders** to sync it manually.

Can I change the service or mode later?

Yes. Everything is adjustable in **Settings** at any time; remember to click **Save Settings**.

Do I collect the COD myself?

No. The courier collects it on delivery and then remits it to you. The **COD** screen is for reconciliation (pending, collected, remitted).

Recommended end-to-end flow

- 1** **Install & connect** the app (Connect now → authorize in Shopify).
- 2** **Configure** in Settings: Client ID, sync mode, default service, free shipping and returns. Save.
- 3** **Enable shipping rates** (dynamic or fixed) if you charge for shipping at checkout.
- 4** **Operate daily**: sync orders (auto/tag/manual), print labels and track.
- 5** **Reconcile COD** and **check Rescue** regularly so nothing gets stuck.

Need help?

For questions about your account, Client ID, services or COD settlement, contact PathXpress support.
